NEW MULTI-STATE DISTRIBUTOR!

PERMA•CRETE®

AND

HOLDFAST
Technologies LLC

“Quality Systems, Inc. is pleased to announce that HOLDFAST Technologies, LLC has been installed as an Exclusive PERMA•CRETE Distributor for the sale and distribution of the PERMA•CRETE product line to the HOLDFAST network of installation companies located throughout the multi-state area of HOLDFAST’s exclusive marketing territory with NUDURA Insulated Concrete Forms (ICFs),” said George A. Henderson, President and Chief Executive Officer of the company which manufactures the products.

PERMA•CRETE Resurfacing Products are distributed worldwide through an extensive network of over 1,200 Dealers and Distributors, and maintains its corporate and manufacturing facilities in Nashville, TN. PERMA•CRETE products have gained global recognition in the past eighteen years as a premium concrete resurfacing material that’s used in the homebuilding industry as well as for vehicular and pedestrian traffic areas, even including interstate highway bridges and airport runway surfaces.

As an acrylic polymer cement compound of over 6,000 PSI compressive strength, PERMA•CRETE is applied over concrete, masonry, aggregate, wood, foam and steel, and provides an architectural surface of unusual strength and flexibility with twice the overall strength and endurance as that of standard concrete. It’s extremely resistant to stains from oil, mildew, salt or water as well as to industrial chemicals, and equally withstands freeze-thaw cycles, intense heat and ultraviolet sunrays. Its sealed and non-porous surface, available in virtually any color or design, provides easy maintenance by using normal household detergents to hose it clean.
